Sugar Cane Growing Crops

- Accounted for in terms of International Accounting Standard - IAS 41: Agriculture
 - Measured and recognised at fair value
 - Changes in fair value are included in the income statement
- Replanting and agricultural costs actually incurred are charged to the income statement in the period
- The fair value elements are a “zero sum equation” over time in the income statement

Accounting for Sugar Cane Growing Crops

International Accounting Standards - IAS 41: Agriculture

- **Sugar cane growing crops are accounted for as biological assets**
 - **Measured and recognised at fair value**
- **Changes in the fair value are included in the income statement**
 - **The fair value of roots is determined on a current amortised cost basis**
 - **Specific costs in each estate**
 - **Adjusted for cost increases**
 - **Amortisation takes place over the life of the roots (range 6 to 12 years)**
 - **The fair value of standing cane is determined by**
 - **Growth of the cane, yield, sucrose content**
 - **Selling prices (including specifics such as European Union exports)**
 - **Less costs to harvest, transport and costs into the market**
- **Replanting and agricultural operating costs actually incurred**
 - **Charged to the income statement in the period**

Accounting for Sugar Cane Growing Crops (cont)

- **Fair Value adjustments - over time: zero sum equation in the Income Statement**
 - At time of cane establishment / expansion: costs incurred, cash outflow and fair value gain
 - Approximately 18 months later: standing cane harvested, sugar produced and sold → cash inflow and standing cane sees negative fair value adjustment
 - Roots value is amortised over time
- **Operating profit generated from sales is recognised when standing cane is harvested for sugar production and sold**
- **Over time: operating profit = cash net inflow**
